Link to repository	
Project description (with listed, used technologies, testing plan)	For the final project we tested the website **https://www.demo.guru99.com/v4/** . We were divided into 2 teams, and for 20-30 minutes, we explored the website. The first task was to find at least 3 bugs by Exploratory Testing and to report them in Jira. The User Stories were analyzed and we created the structure of the project based on Epic, Version, Test Cycle and Test Suites. We established the testing environment: Chrome, Firefox. We created Test Cases which were divided into folders and subfolders (based on requirements). We executed the test cases and we set their status per step (passed/failed). The bugs encountered were linked to the test cases and we established the severity for each one. The outcome was added: test executions, screenshots and comments. To conclude the project, we created a report (based on Test Metrics) which describes the entire project.You will find the conclusion report below.

FINAL PROJECT

Final Project

1   General info:

Name project: Final Project

Version: Version 1.2

Epic: Group I - II

Environment: Chrome v.103 on Windows 10 / Linux / safari on macOS* / android

Cycle Summary: Groups I - II Requirements Test Cycle
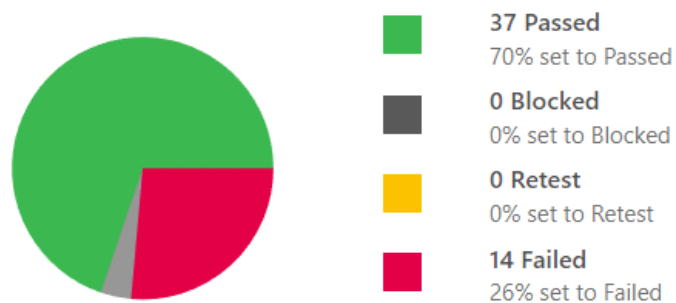

Folders based on Stories:
- **New customer**
- **Edit customer**
- **Delete customer**
- **New account**
- **Edit account**
- **Delete account**
- **Compability test**

2   Test Metrics for Final Project

In the period 17.07.2022-24.07.2022 were executed 51 test cases, 37 (70%) were passed, 14 (26%) were failed.

**The highest number of test cases executed were on 17.07.2022 - 37 passed and 14 failed.**

There is no unscheduled test case(s), all of 51 test cases from Version 1.2 were done.

37 Passed
70% set to Passed

0 Blocked
